
F: $D = 3$, $P = \infty$, absorbing ends. S8: $D \in \{2.85, 3\}$, $P \in \{10^{-5}, \infty\}$, either end condition.

S24: $D \in \{1, 2, 2.85, 3\}$, $P \in \{10^{-6}, 10^{-5}, \infty\}$, either end condition. D in 10^{-10} m²/s; P in m/s.

All sources uniform and maintained to 30 min; fixed dose and density. Minimum thickness is unassigned physically.
